

Prepared for

COMPANY
NAME

Accelerating Data Preparation for AI:
Empower teams with a streamlined data
analysis and corpus creation process,
paving the way for efficient and
powerful generative LLM deployment.

Boost performance with our tailored Data Preparation solution, designed for rapid implementation, effortless scaling, and continuous refinement. Drive innovation and streamline operations as we navigate data analysis and corpus creation, empowering your team to achieve superior results and lay the foundation for exceptional customer experiences.

Executive Summary

We will focus on preparing your existing data for the integration of Generative Large Language Models (LLMs). This involves cleaning, analyzing, and organizing the data to ensure it is ready for generative LLM deployment. By enhancing data management and preparation, we aim to set the foundation for improved customer service interactions and decision-making. This four-week engagement will evaluate where your data lies on the readiness continuum, ensuring it is in optimal condition and paving the way for significant operational improvements and enriched customer experiences.

Objectives

- The primary objective of this assessment is to evaluate and prepare your existing data for the integration of Generative Large Language Models (LLMs). This involves a thorough review and analysis of sample data to assess its readiness for advanced AI operations. We will conduct data cleaning, organization, and analysis to identify and address gaps, inconsistencies, and redundancies, ensuring that the dataset is robust and reliable for AI initiatives.
- Throughout the assessment, we will work closely with your team to align the data preparation with your specific operational needs. The final deliverable will be a comprehensive report detailing the data's readiness level, along with recommendations for next steps in your AI and Generative LLM journey. This report will serve as a foundation for future AI deployments, ensuring that your data is well-prepared for enhanced customer interactions and service quality.

Deliverables

Activities

- Perform Data Analysis techniques for (when applicable)
 - Quantitative Data Analysis
 - Descriptive Statistics
 - Exploratory Data Analysis (EDA)
 - Correlation and Regression Analysis
 - Hypothesis Testing
 - Qualitative Data
 - Thematic Analysis
 - Content Analysis
 - Sentiment Analysis
 - Narrative Analysis

Documentation

- Create Model Deployment Plan
- Provide Testing and Validation Reports
- Deliver Comprehensive Documentation
 - Detailed findings from both quantitative and qualitative data analysis.
 - Visual representations of key data points and trends.
 - Insights and interpretations based on the analyzed data.
 - Recommendations for optimizing data readiness for AI and Generative LLM deployment.

Trace3 D&A Resources

- Data Science Solution Architect
- Sr. Data Analytics Engineer

Assumptions

- Weekly progress reviews & status checkpoints
- Existing documentation provided and access provisioned by start of project
- Access to SME's and technical domain experts provided as necessary
- Access to Client team leads for use case requirements gathering

Estimated Service Delivery Timeline
3-4 weeks

Budgetary Estimate
